

Anveet Pal

Computer Science Engineer · Python Developer

8602875539 | anveetpal12@gmail.com | www.linkedin.com/in/anveet-pal | <https://github.com/anveetpal01>

SUMMARY

Python developer building automation scripts, computer-vision modules, and data pipelines, with hands-on experience in backend development, REST APIs, async/webhook integrations, and ML model development.

SKILLS

Languages: Python, Java, JavaScript, SQL.

Backend & Frameworks: FastAPI, Flask, Django, .NET, REST APIs

Frontend: React.js, Streamlit.

AI & ML: LLM tool-calling & agents (Ollama, OpenAI SDK), scikit-learn, XGBoost, distilBERT

Data & Analytics: Pandas, Seaborn, Power BI, Matplotlib, ETL/ELT

Computer Vision: OpenCV, YOLO (Ultralytics), ByteTrack, GPU/CPU inference (FP16)

Databases & Tools: MySQL, MSSQL, Git & GitHub, Postman, VS Code, PyCharm, Visual Studio 2022

Cloud & Deployment: Amazon EC2, Render, Vercel.

Others: C#, Java, Automation (Selenium), Playwright, CI/CD basics, TypeScript, Next.js, Shopify, Figma, Microsoft Power Platform.

EXPERIENCE

Python Developer · Miraigate Technologies

Feb 2026 – Present

- Built real-time video streaming pipelines in Python using LiveKit, publishing low-latency live streams to web clients for interactive real-time experiences.
- Designed async Python backend flows and webhook integrations to handle real-time data processing across multiple services.
- Developed computer-vision modules (OpenCV, YOLO) to process live video feeds for a real-time object classification.
- Built and maintained Python automation scripts for multiple projects, adapting quickly to shifting priorities in a fast-paced environment.

Junior Consultant Intern · Hosho Digital

Jul 2025 – Nov 2025

- Developed and modified .NET backend system, managing databases and ensuring smooth frontend integration.
- Automated software tasks with Microsoft Power Platform.
- Performed data engineering and analysis with Pandas and Seaborn to deliver custom client solutions efficiently.

Python-ML Intern · Alveofit (Roundwork Technologies)

Feb 2025 – Mar 2025

- Built and deployed a two-stage XGBoost ML pipeline for real-time asthma severity prediction; monitored model performance through EDA.
- Implemented a Flask REST API with robust input validation and error handling, integrating the model for production use.

Disease & Asthma Prediction API · Flask · XGBoost · ETL

- ETL-driven Flask REST API serving an XGBoost model for real-time disease severity prediction with feature encoding and robust error handling.
- Source: [Link](#)

Rewards Management API · .NET 8 · C# · MySQL

- RESTful API for member accounts, reward-points accrual and coupon redemption, following clean-architecture principles.

EDUCATION

Bachelors of Technology, Computer Science & Engineering · Medcaps University

2021 – 2025

CERTIFICATIONS

- Microsoft Power BI — Advanced Analytics, Data Visualization, Business Intelligence
- Alteryx — ETL, Data Analytics, Analytical Problem Solving
- Figma — UI/UX, Web Design
